Local flood information

There have been at least fifteen significant flood events in Batesford between 1980 and 2022.

The largest flood on record was in 1995 when the floodwater reached 5.44 metres at the Batesford Gauge.

Flooding can happen within hours, giving people little to no time to prepare and take action.

Why does Batesford flood?

Batesford has experienced frequent flood events since the early 1950s. Early records of significant flooding in Batesford can be traced back as far as 1880.

Riverine flooding

- When the Moorabool River rises and overflows it's banks spilling out onto land, it causes **riverine flooding**. The most common cause of this is consecutive days of moderate to heavy rainfall.
- The Moorabool River runs through Batesford, crossing the Midland Highway near the Batesford Hotel. It joins with the Barwon River at Fyansford.

Flash flooding

- This kind of flooding can happen quickly and you may not receive an official warning. Although these floods only last short time, they can cause severe damage.

How do floods impact communities?

Even if your home or workplace stays dry, floods can impact you in many ways.

Buildings flooded

Road closures

Drinking water supply and quality affected

Power outages

Mobile and internet network outage

Sewage overflows inside building

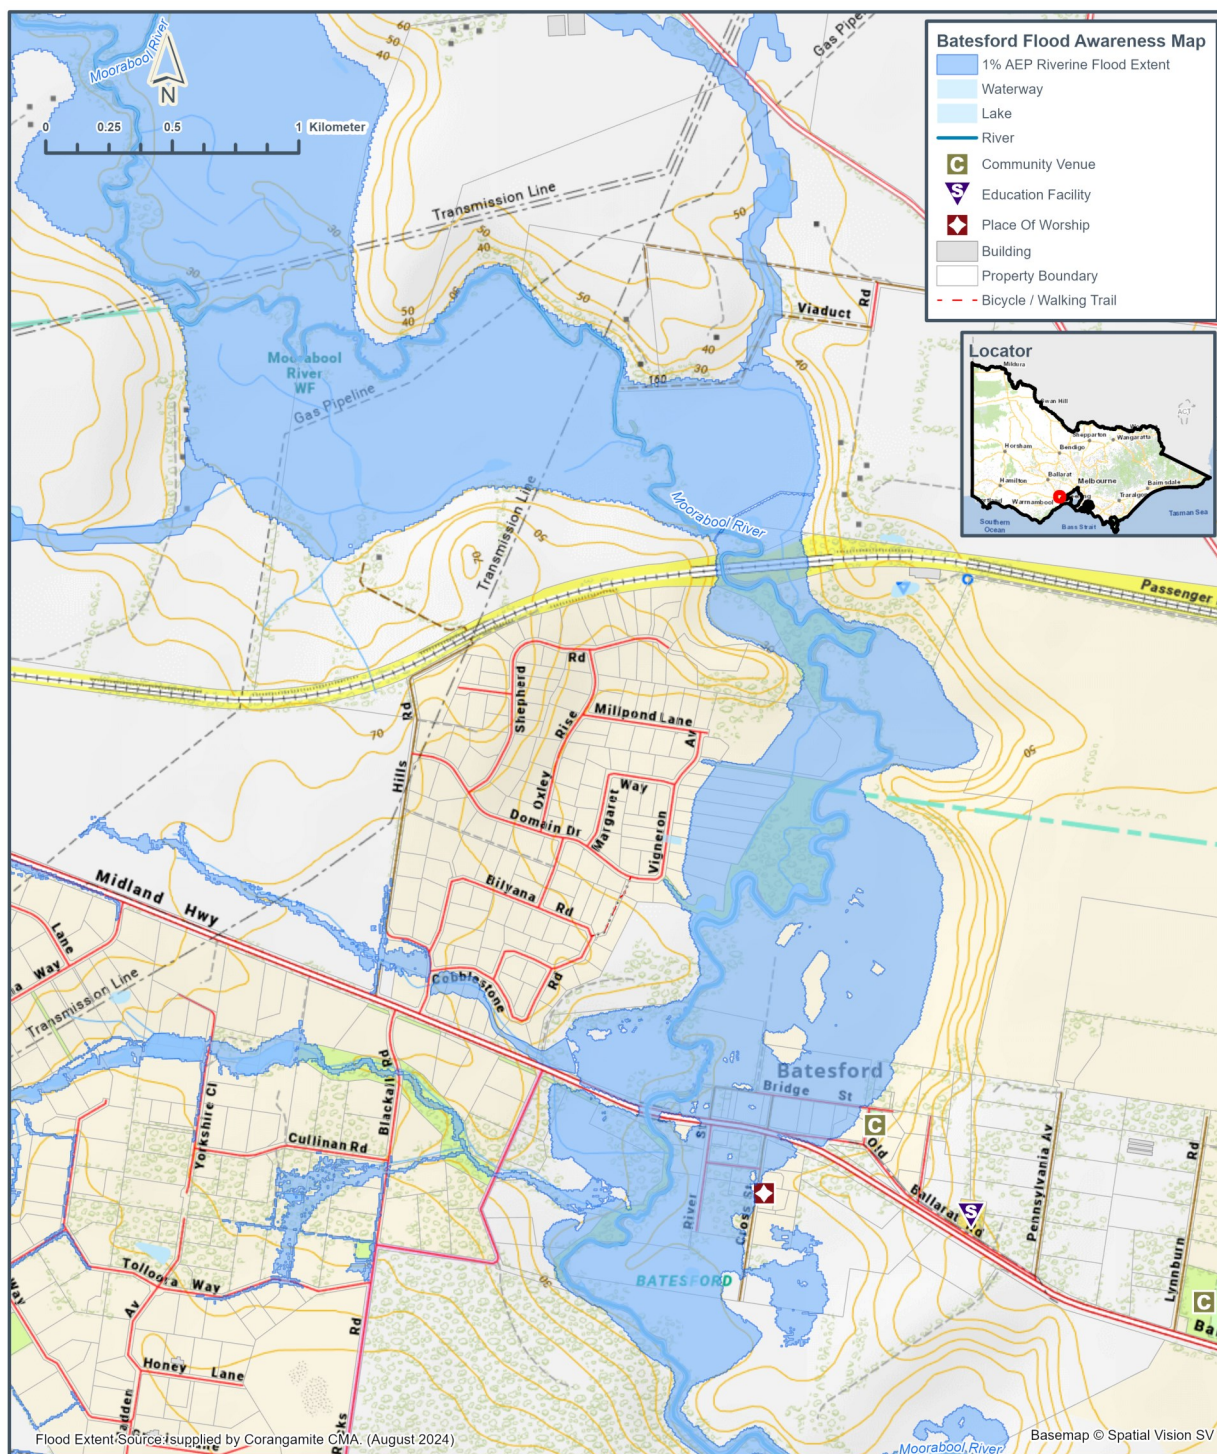

Check your home, work, and travel routes for floodwater

If this map shows potential flood risk for you, ensure you take action to **plan and prepare for floods**. See [page 7](#) for details.

- This map shows the area likely to flood in a significant event that would measure at least 4.75 metres high at the [Moorabool River at Batesford gauge](#).
- This height is 0.15 metres below the major flood level. See [page 5](#) for more information.

You can view an interactive version of this map using the Victorian Government's [Digital Twin Victoria](#) Portal (see page 6 for details).

Disclaimer: This map publication is presented by Victoria State Emergency Service for the purpose of disseminating emergency management information. The contents of the information have not been independently verified by Victoria State Emergency Service. No liability is accepted for any damage, loss or injury caused by errors or omissions in this information or for any action taken by any person in reliance upon it. Flood information is provided by Corangamite Catchment Management Authority.

What might happen in a flood in your area?

Although no two floods are the same and the environment is constantly changing, the below table provides an idea of what to expect at different flood heights.

- **Before a flood:** Use the floodwater heights in the table to help you decide when you will need to act to protect yourself and your property in a flood event.
- **During a flood:** When a warning is issued by [VicEmergency](#), use the predicted floodwater height and warning information to understand what the potential impacts may be for you and your community.

| Height* (metres) | Potential impacts and previous flood events^ |
|---------------------|--|
| 5.64m | 54 buildings are flooded, with 35 flooded above floor level including the Batesford Hotel. Flood depth along the Midland Highway is now at about 0.70m. |
| 5.44m | November 1995 flood event. 25 residential buildings flooded above floor level and 20 properties were evacuated. Cross Street, Bridge Street, Midland Highway and River Street were flooded. |
| 5.10m | 45 buildings are flooded, with 25 flooded above floor level, mostly on the east side of the river. |
| 4.90m | Major flood level |
| | Flood height shown on map, see page 4. |
| 4.75m | 31 buildings are flooded, with 18 flooded above floor level, in River Street, Cross Street, Ballarat Road, Old Ballarat Road, and Regent Street. Access along the Midland Highway is cut, isolating the eastern and western sections of town. Most houses located between Cross Street, and River street are impacted by floodwater as well as the Batesford Hotel. |
| 4.61m | 5 buildings are flooded above floor level in Bridge Street, Old Ballarat Road, and River Street. Widespread flooding occurs to the north of Batesford. Floodwater impacts the north side of Midland Highway. |
| 4.35m | Significant floodwater breaks out of the Moorabool River, flooding 4 buildings above floor level in Bridge Street, Old Ballarat Road, and River Street. Water spills over Cross Street, cutting access to the north. Access to Bridge Street is cut, with deep flooding to the east. Deep flooding cuts access to the western section of Old Ballarat Road. |
| 4.32m | November 2022 flood event |
| 4.15m | April 2001 flood event. |
| 4.10m | Floodwater spills over River Street, cutting access. Most farmland and parkland along the Moorabool River is impacted by floodwater. |
| 4.07m | January 2011 flood event. |
| 4.00m | Moderate flood level |
| 3.80m | More extensive flooding within the Moorabool River floodplain. Water begins to spill over Bridge Street, cutting access. |
| 3.19m | Most floodwater is within the banks of the Moorabool River, with only minor flooding breaking out in some low-lying areas. |
| 2.99m | September 2016 flood level |
| 2.70m | Minor flood level |

*The height measurement is at the [Moorabool River at Batesford gauge](#)

^This table includes information from previous flood events and flood studies, which are scientific models used to predict impacts at different flood heights and flows.

View the interactive flood map on Digital Twin Victoria

The [Digital Twin Victoria Portal](https://digitaltwin.vic.gov.au) brings together 2D, 3D and live data in a single online place for everyone to use. The Portal hosts some flood mapping data.

- Use the portal to zoom in on where you live, work and travel to see if these locations are likely to be affected in a large flood event.

Go to digitaltwin.vic.gov.au.

In a flood emergency, stay informed through [VicEmergency](https://vicemergency.vic.gov.au), see [page 8](#) for more information.

Spotlight: 1995 Batesford Flood Event

5.44

Metres height at the Batesford Gauge.

35

Properties flooded above floor

Roads impacted:

- Midland Highway (Ballarat Road)
- Cross Street
- River Street
- Bridge Street
- Old Ballarat Road.

Time to subside

Two days until the flood peak level decreased.

Midland Highway, Batesford (1995)

Plan and prepare for floods

1 How to stay informed

VicEmergency is Victoria's source of emergency information and warnings.

- Set-up a watch zone for your area for alerts when warnings are issued.
- Learn about the three different warning levels.

VicEmergency app
emergency.vic.gov.au
1800 226 226

vicemergency

@vicemergency

2 Make an Emergency Plan

Use information from your Local Flood Guide and your Catchment Management Authority, to help you decide;

- What you will do in a flood emergency
- When you will do it
- Who you will inform

Red Cross RediPlan is a free tool that helps you create a simple emergency plan that supports the flood actions you have chosen.

- Visit redcross.org.au/prepare
- Download the [Get Prepared](#) app

3 Prepare an emergency kit

You may need to stay safe for 72 hours in a disaster before help arrives. Make sure you have safe drinking water, food, and any special needs or medications for all family.

There will be extra items to be added to your emergency kit in an emergency like clothes, a phone and charger.

Watch a video on how to get your Emergency kit ready.
youtu.be/XgyLnKDMkNo

4 Reduce impacts to your property

- ☐ Keep gutters and drains clear of debris including leaves and any other items.
- ☐ Check your building and contents insurance, what kind of flooding does it cover?
- ☐ Move your valuable possessions up high.
- ☐ Back up important files and documents to a cloud storage or USB kept elsewhere.
- ☐ Identify higher ground on or around your property, away from the danger area.
- ☐ Consider buying sand and sandbags ahead of time, refer to our Sandbag Guide for more information.

If you expect floodwater at your property

1

Bag it

Sandbag doorways and low-lying windows to slow floodwater entering your home.

2

Block it

Block toilets, bath and drains using a sandbag ideally placed inside a plastic rubbish bag.

3

Lift it

Put your valuables and electrical items as high as possible. Turn off power, gas, and water at the mains.

4

Leave

- Leave **before** the flood arrives.
- Check warnings from VicEmergency for information like evacuation or relief centres, and road closures.
- Travel to the home of family or friends who are in a safe location, away from the flooded area.

Take your emergency kit and add the items below:

Phone & charger

Prescriptions & medication

Clothes for your family

Strong shoes

Pet needs

Never drive through floodwater

Large

A Large 4WD can be moved by water only 45cm deep.

Small

A small car can be moved by water only 15cm deep.

ses.vic.gov.au/flood

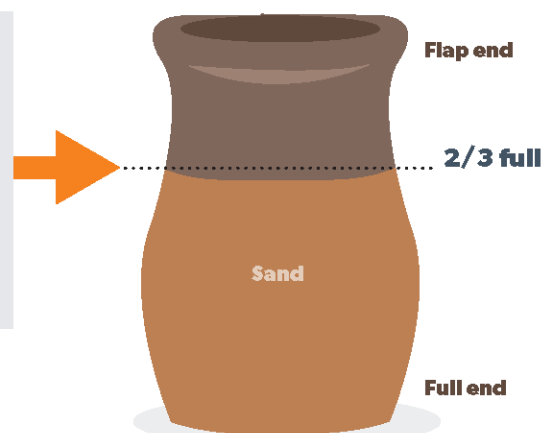

Sandbagging

Protecting your home

Sandbags won't stop the water completely, but can reduce the amount of water entering your home.

How do I fill a sandbag?

- Only use sand to fill hessian bags. Do not use dirt.
- Only fill sandbag two-thirds full.
- Do not over fill the sandbag as it will be too heavy to carry.
- Do not tie the top of the sandbag.
- Take care when filling and lifting the sandbag, to avoid injury.

How do I lay sandbags?

- Lay sandbags like brickwork. Stagger rows so that the joins do not line up.
- Start at one end and work to the other end.
- Ensure the unfilled part of the bag is covered by the next bag.
- Tuck flap under the bag at the end of the row.
- If the sandbag wall is going to be more than five (5) bags high, you will need to lay two (2) rows wide.

Where do I place the sandbags?

- Place sandbags in plastic bags to cover drainage holes in home (e.g. showers, toilets, sinks) to stop back flow of water.
- Place a small wall across doorways, at least the height of the expected water level. Be careful not to trap yourself inside.
- If available, plastic sheeting may be used under sandbags to reduce the seepage.

Block it

Toilets, bath and all drain holes

Plastic Sheetting

What do I do once I have finished with the sandbags?

- Sturdy gloves should be worn when handling wet sandbags as they can contain chemicals, waste and diseases.
- Sandbags that have been in contact with floodwater need to be thrown away.
- Contact your local council to find out how to dispose of your sandbags safely.

Sandbags and sand

Preparing your home

Having sandbag supplies ready can assist you before a flooding emergency occurs.

What supplies do I need to sandbag my home?

- Sandbags
- Sand
- Plastic sheeting
- Gloves and safety goggles
- Shovel or hand scoop

Where can I purchase these supplies?

- Many sandbag supplies can be purchased from hardware stores or garden centers.
- VICSES do not routinely supply sandbags to households.
- During floods, sandbag distribution points may be established in flood-affected areas.

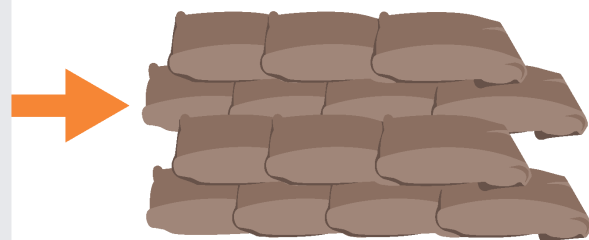

How many sandbags will I need and how much sand?

- Most homes can be protected by less than 25 sandbags.
- The number of sandbags will depend on your local flood risk and availability.
- Sandbags are filled 2/3 full which requires around 15-20kgs of sand per bag.

How do I store my sand and sandbags?

- Filled sandbags only have a short shelf life.
- It is recommended to store sandbags empty.
- Sandbags should be stored in a cool dry area away from UV light.
- Sand should be kept dry and can be stored in water-resistant containers or under a tarp.
- Sand is heavy - ensure it is stored so it can be moved safely.

When should I sandbag my home?

- **You** are best placed to decide if there is a need to sandbag your home, based on local knowledge and past flood events.
- Monitor your local conditions. Stay up-to-date with weather forecasts and warnings by downloading the **BOM Weather** and **VicEmergency** apps, or call the VicEmergency Hotline on 1800 226 226.
- If you think you are at risk, do not wait for an official warning to act.
